

FROM PRIORITIES TO ACTION

A practical 6-point plan for a cleaner, safer, more affordable and opportunity-rich Brampton

My governing principle: Before supporting a major decision, I will ask: Is it needed? Is it affordable? Is it measurable? Does it improve residents' daily lives? And can the result be shown publicly?

Sameer Tandon

Regional Councillor Candidate, Wards 2 & 6, Brampton

Not just your vote - your voice.

How I would turn a promise into results

A Regional Councillor has influence - but must use the right lever

A Brampton Regional Councillor sits at both Brampton City Council and Peel Regional Council. That creates a real opportunity to connect City services with Regional services, but no councillor can legally or honestly promise to control everything alone.

The five tools I would use

1. Motions and votes: bring motions, amendments and budget directions to City and Regional Council.
2. Staff reports: request evidence, options, costs, timelines and service standards before major decisions.
3. Budget discipline: support, change or reject spending through the annual City and Region budget processes.
4. Performance accountability: require public dashboards, response-time targets, project milestones and explanations when targets are missed.
5. Advocacy and partnerships: press the Province, federal government, Metrolinx, hospitals, police governance bodies and community partners where municipal government does not have direct authority.

A promise I can keep: I will never tell residents that one councillor can simply 'order' a hospital, police deployment, Highway 410 expansion or GO service. I will clearly identify who is responsible, what action I can take, and what progress has actually been made.

My public accountability method

- Publish a simple 6-priority scorecard every 6 months: Green = on track, Yellow = delayed, Red = off track.
- Show the motion/report/budget line behind each claim - not only a social-media announcement.
- Hold regular Wards 2 & 6 community updates and publish unresolved issues with the responsible department.
- Use 311/service data and resident feedback to identify repeat problems instead of relying only on one-time complaints.

Current tax reality to explain honestly

In 2026, Brampton says every property-tax dollar collected is split approximately 40.4 cents to the City, 40.2 cents to Peel Region and 19.4 cents to school boards. A Regional Councillor can vote on the City and Region portions, but not the education portion.

The 2026 City budget approved a 0% increase to the City portion plus a 1% hospital levy. That means 'lower property taxes' should be presented as disciplined control of municipal spending and tax pressure - not as a guarantee that one councillor can reduce the entire bill.

1. LOWER PROPERTY TAXES & CUT WASTE

From campaign priority to a measurable council work plan

What this really means: Taxes should pay for services residents can see and measure. The strongest approach is not an unrealistic promise to cut every tax bill; it is to control the City and Regional portions through disciplined budgets, measurable savings and transparent reporting.

What I would do

- Ask for a line-by-line review of large discretionary spending, consulting contracts, overtime, vacant positions, duplicated programs and recurring projects that repeatedly miss budget or schedule.
- Require every major new program to show total lifecycle cost - not only the first-year cost - plus a measurable service outcome.
- Support multi-year procurement and shared purchasing where it demonstrably lowers cost without lowering service quality.
- Push for a public 'Savings and Waste Reduction' dashboard showing savings achieved, cost avoidance, contracts reviewed and money redirected to frontline services.
- Use reserves carefully: do not use one-time reserves to permanently fund recurring expenses unless there is a sustainable plan.
- At Peel Region, build on the existing Continuous Improvement program and set annual savings/cost-avoidance targets.

First 100 days

- Request a City/Region report identifying the 20 largest controllable operating-cost increases and the 20 largest consultant/professional-service contracts.
- Ask for a three-year comparison of budget vs. actual spending for departments with repeated variances.
- Propose a public quarterly list of major contracts, change orders and capital projects that are over budget or late.

Year 1-2

- Target savings before service cuts by reviewing procurement, duplication, consultant use, energy/fleet costs and low-value programs.
- Protect core services - transit, fire, roads, parks, enforcement and frontline Regional services - while challenging low-priority spending.
- Before any municipal tax increase, publish what drove it, what was cut first, and what residents receive in return.

How residents can judge me

What I will track	Target / standard	Public proof
Municipal tax pressure	Keep City/Region increases as low as responsibly possible	Budget vote + tax impact table
Cost savings	Annual audited savings/cost-avoidance target	Public savings dashboard
Capital overruns	Fewer projects materially over budget/schedule	Quarterly capital status
Consultant spending	Explain major increases and alternatives	Annual contract summary

Simple wording I can use at the door

“I will not promise a number before seeing the full budget. I will promise a process: find waste first, protect essential services, show residents the numbers, and vote accordingly.”

Research note

Peel reported \$8.1M in cost savings and \$3.4M in cost avoidance in 2025, contributing to \$100.3M in cumulative cost containment from 2021-2025.

2. SAFER STREETS & SAFER NEIGHBOURHOODS

From campaign priority to a measurable council work plan

What this really means: Public safety requires three different tools working together: police for crime, municipal by-law enforcement for property/parking/rental/noise issues, and safer road design for collisions and speeding.

What I would do

- Support adequate, evidence-based police resourcing through the Regional budget while respecting that Council does not direct individual police operations.
- Strengthen proactive by-law enforcement for illegal parking, unsafe property conditions, rental-housing violations, illegal dumping, noise and repeat problem properties.
- Require service standards for 311/by-law files: acknowledgement, inspection target, repeat-offender escalation and closure reason.
- Use collision and speeding data to prioritize traffic calming, lighting, crosswalk improvements, protected-turn phases and school-zone safety measures.
- Create ward-level safety walks with residents, police/community partners, traffic staff and enforcement staff for repeat hotspots.
- Demand a coordinated response for properties generating multiple verified complaints across parking, occupancy, garbage and safety.

First 100 days

- Map the top repeat complaint and collision locations in Wards 2 & 6 using City/Region data.
- Review results from Brampton's proactive by-law enforcement pilot that began June 29, 2026, and push to keep or expand what works.
- Request a ward dashboard for parking, property standards, rental licensing, dumping, noise and road-safety complaints.

Year 1-2

- Measure whether repeat complaints fall at targeted properties/areas.
- Prioritize street-lighting, crosswalk and traffic-calming capital dollars using collision/risk data.
- Coordinate municipal prevention programs with Peel Regional Police and community organizations without politicizing operational policing.

How residents can judge me

What I will track	Target / standard	Public proof
By-law response	Published target by complaint type	311/by-law dashboard
Repeat problem properties	Year-over-year reduction in verified repeats	Escalation report
Road safety	Reduction in fatal/injury collisions at treated sites	Vision Zero data
Resident perception	Annual ward safety survey	Public results

Simple wording I can use at the door

“Safety is not one slogan. Police, enforcement, road design and prevention each have a role. I will measure all four.”

Research note

Peel Regional Police's 2026 budget is \$837.3M, including funding for 175 additional officers and 25 civilian professionals. Peel's Vision Zero framework prioritizes engineering, education, enforcement and empathy.

3. IMPROVE PUBLIC TRANSIT & REDUCE TRAFFIC

From campaign priority to a measurable council work plan

What this really means: Brampton Transit is a City service, while many major roads are Regional or Provincial and GO service is controlled by Metrolinx. The practical plan is to improve reliability and capacity where the City has control and advocate with evidence where it does not.

What I would do

- Use automatic passenger-count and on-time performance data to identify chronic overcrowding, pass-bys and unreliable routes.
- Add or reallocate peak-period service where crowding is repeated - especially connections to Mount Pleasant GO, major schools, employment areas and high-demand corridors.
- Set public reliability standards and publish route-level performance, not only system-wide averages.
- Support transit signal priority, queue-jump lanes and intersection changes where they save bus travel time without creating unacceptable local impacts.
- Coordinate Brampton Transit schedules with GO trains and major shift changes at employment areas.
- Review low-ridership service and redesign it instead of simply running nearly empty buses while overloaded routes lack capacity.
- Advance the 2051 Brampton Mobility Plan with a balance of road improvements, transit, walking and cycling - using actual demand and safety data.

First 100 days

- Request a Wards 2 & 6 transit heat map: top crowded trips, pass-bys, late routes and gaps in service.
- Ask staff to identify quick wins that can be delivered in one schedule period: extra trips, larger buses, schedule recovery time or route adjustment.
- Create a GO/Brampton Transit coordination request for peak-period connections at Mount Pleasant GO.

Year 1-2

- Publish before/after results on routes receiving added service.
- Prioritize bus travel-time improvements at the worst delay intersections.
- Advocate to Metrolinx and the Province for GO capacity/frequency improvements using documented crowding and missed-connection data.

How residents can judge me

What I will track	Target / standard	Public proof
Overcrowding	Fewer pass-bys and crush-load trips	Route load reports
Reliability	Higher on-time performance	Quarterly route dashboard
Travel time	Reduced delay on targeted corridors	Before/after travel times
GO connections	Fewer missed scheduled transfers	Timed-connection review

Simple wording I can use at the door

"I do not want empty buses where demand is low and overcrowded buses where people are left behind. Service should follow real ridership and real travel patterns."

Research note

Brampton's 2051 Mobility Plan was endorsed in September 2025. Transit service changes in 2026 have explicitly been used to improve reliability and align service with ridership demand.

4. DIGNITY & BETTER CARE FOR OUR SENIORS

From campaign priority to a measurable council work plan

What this really means: Senior support is shared across Brampton, Peel Region and Ontario. A Regional Councillor can directly influence Peel seniors services, long-term-care budgets, TransHelp, Regional housing and City accessibility/recreation/transit policies.

What I would do

- Protect quality and staffing in Peel's five long-term-care homes and require transparent reporting on quality, vacancies and wait pressures.
- Expand community-based supports that help seniors age safely at home, including Adult Day Services, caregiver support, respite and social-work navigation.
- Improve TransHelp reliability and booking experience, with clear performance standards for on-time trips and customer service.
- Accelerate affordable and accessible senior housing projects and advocate for more provincial/federal capital support.
- Create a simple senior-services navigation guide so families know which services are City, Region, Province or Ontario Health atHome.
- Protect the existing free Brampton Transit program for residents 65+; before expanding eligibility to younger ages, require a cost and ridership study so the promise is financially sustainable.
- Improve age-friendly public spaces: benches, shade, washrooms, snow/ice response, safe crossings and accessible sidewalks.

First 100 days

- Ask Peel for a public Wards 2 & 6 senior-needs snapshot: TransHelp demand, housing wait pressures, caregiver supports and local service access.
- Request service-quality measures for Peel LTC and Adult Day Services in a resident-friendly format.
- Launch quarterly senior roundtables with caregivers and service providers.

Year 1-2

- Advocate for more respite and Adult Day capacity where wait/demand data supports it.
- Track Brampton senior-housing projects and remove municipal delays within City/Region authority.
- Use accessibility audits to prioritize sidewalks, crossings, benches and transit stops near senior-heavy areas.

How residents can judge me

What I will track	Target / standard	Public proof
LTC quality	Maintain/improve key quality indicators	Peel annual performance report
Community supports	More clients/caregivers served	Adult Day/support service volumes
TransHelp	On-time + complaint performance	Quarterly service metrics
Senior housing	Units moving from planning to construction	Project tracker

Simple wording I can use at the door

“Dignity means more than a program name. It means reliable transportation, safe housing, respectful care, help for caregivers and the ability to age in the community.”

Research note

Peel operates five long-term-care centres. Its 2026 plan anticipates 861 LTC residents, 867,640 TransHelp trips and more than 43,000 combined virtual/in-person Adult Day and Community Support service units. The combined LTC waitlist was 3,277 as of June 2025.

5. BETTER HEALTHCARE FOR OUR COMMUNITY

From campaign priority to a measurable council work plan

What this really means: Hospitals and doctors are primarily Provincial responsibilities. Municipal government can contribute the required local share, use planning/infrastructure tools, advocate, and help coordinate community health - but a councillor cannot independently build or staff a hospital.

What I would do

- Protect transparent accounting of Brampton's hospital levy and ensure funds reserved for the local share are used for the intended health-care infrastructure commitment.
- Demand regular public milestone updates on Peel Memorial: design/development phase, major approvals, construction milestones, target schedule and local-share status.
- Work with the Province, Infrastructure Ontario and William Osler to remove municipal permitting/infrastructure delays that are within Brampton's control.
- Advocate for the second hospital to proceed as quickly as responsible while supporting long-range planning for a future third hospital as population grows.
- Advocate for funded health-care positions, expanded cancer care and better access to primary/urgent care - while clearly acknowledging these funding decisions are provincial.
- Use Peel Public Health and community partners for prevention, newcomer health-system navigation and education about ER vs urgent care vs primary care.

First 100 days

- Request a public hospital-funding ledger showing levy collected, reserve balance, commitments and payments.
- Ask for a joint City/Osler milestone briefing that residents can understand.
- Bring a motion supporting evidence-based long-range planning for Brampton's future hospital capacity beyond the second hospital.

Year 1-2

- Track whether local municipal actions are on schedule and escalate avoidable delays.
- Advocate jointly with Brampton Council and Peel for provincial operating and capital funding tied to population growth.
- Publish a semi-annual health infrastructure update separating municipal actions from provincial/Osler actions.

How residents can judge me

What I will track	Target / standard	Public proof
Hospital local share	100% transparent levy/reserve reporting	Annual audited statement
Peel Memorial milestones	Milestones met or delays explained	Public project tracker
Municipal approvals	No avoidable City-caused delay	Permit/infrastructure status
Future capacity	Formal advocacy + planning evidence	Council motions/letters

Simple wording I can use at the door

"I will never pretend City Hall controls the hospital system. I will use every municipal lever we do have - funding, approvals, advocacy and public accountability - and show residents exactly who is responsible for the rest."

Research note

Peel Memorial's expansion is in development with early construction started in 2025. Plans include up to 250 inpatient beds and a 24/7 emergency department. Osler states the Province funds 90% of hospital construction, while the community is responsible for the remaining 10% plus equipment, IT, furniture and other essentials. Brampton has a \$125M municipal commitment supported by a 1% levy.

6. AFFORDABLE HOUSING, GOOD JOBS & OPPORTUNITIES FOR EVERYONE

From campaign priority to a measurable council work plan

What this really means: Housing affordability is not solved by one project or one level of government. Municipal tools can speed appropriate housing approvals, support non-profit/affordable projects, regulate rentals and shape complete communities. Economic development can help businesses start, grow and create local jobs.

What I would do

- Track housing applications publicly and identify avoidable municipal delays while maintaining safety, infrastructure and planning standards.
- Use the City's affordable-housing Community Improvement Plan and other incentives to support non-profit and deeply affordable housing where public benefit is clear.
- Support purpose-built rental, seniors housing and family-sized options near transit and services, not only small investor units.
- Strengthen enforcement of rental housing, occupancy, parking and property standards so adding housing does not mean accepting unsafe or overcrowded conditions.
- Protect and expand the Brampton Entrepreneur Centre as a practical one-stop shop for permits, mentorship, market research and financing/grant guidance.
- Create a 'small business red-tape review' focused on duplicative forms, confusing licensing steps and avoidable approval delays.
- Connect local employers, TMU's medical school, colleges, youth and newcomer talent to internships, skilled trades, entrepreneurship and local procurement opportunities.
- Measure whether economic-development spending produces business retention, investment and jobs - not only events and announcements.

First 100 days

- Request a dashboard of major affordable/rental projects in Brampton with stage, units, approval bottleneck and expected completion.
- Meet small businesses in Wards 2 & 6 and compile the top 10 municipal barriers to opening or expanding.
- Ask Economic Development to publish a simple guide to all active small-business grants, mentorship, incubator and export programs.

Year 1-2

- Set a service standard for municipal business inquiries and routine licence/permit processes where legally possible.
- Support affordable projects that demonstrate real below-market benefit and transparent public value.
- Create local job and apprenticeship roundtables tied to employers with actual vacancies and training pathways.

How residents can judge me

What I will track	Target / standard	Public proof
Housing approvals	Reduce avoidable municipal processing time	Application dashboard
Affordable units	Track funded/approved/under-construction/completed	Housing project tracker
Small business	More firms using BEC + measured	Annual client outcomes

What I will track	Target / standard	Public proof
	outcomes	
Jobs/investment	Track jobs retained/created and investment attracted	Economic development report

Simple wording I can use at the door

“Growth must improve life for residents. I want more housing people can actually afford, safe neighbourhood standards, and a City Hall that helps good businesses open, expand and hire locally.”

Research note

Peel reported nearly 97,000 households in core housing need in 2025, with fewer than 1 in 5 households in need able to access affordable-housing assistance. Current Brampton-area projects include 198 affordable senior rental units at Basswood, 52 supportive units in Downtown Brampton and 20 affordable rental units in Mount Pleasant. Brampton says almost 90% of its businesses are small; the BEC offers mentorship and programs including grants of up to \$5,000 through Starter Company Plus.

The 6-priority public scorecard

What I would show residents every six months

Priority	Key result	Status	Evidence
1. Taxes & waste	Savings found before service cuts	Green / Yellow / Red	Link to report, motion or data
2. Safety	Complaint/road-safety results improve	Green / Yellow / Red	Link to report, motion or data
3. Transit & traffic	Crowding/reliability improve	Green / Yellow / Red	Link to report, motion or data
4. Seniors	Care, TransHelp & housing progress	Green / Yellow / Red	Link to report, motion or data
5. Healthcare	Hospital milestones + transparent local share	Green / Yellow / Red	Link to report, motion or data
6. Housing/jobs	Units, approvals, small-business & job outcomes	Green / Yellow / Red	Link to report, motion or data

My rule for campaign promises

- Do not promise what another level of government controls.
- Do not announce a target without saying how it will be measured.
- Do not call spending an 'investment' unless the public benefit can be demonstrated.
- Do not hide delays - explain the reason, responsible agency and next action.
- Ask residents before major ward-impacting decisions, then publish what was heard and what changed.

The message to residents: These six priorities are not six slogans. Each one becomes a work plan with a responsible department, a budget decision, a timeline and a public measure of success.
